

Concrete panel pools

Modern production technology allowed for creating concrete panel pools, which combines the simplicity and quick installation, as well as strength and versatility.

Main features:

The unique structure which allows to build pools on the sandy beach

Possibility to build a swimming pool both ground and completely dug into the ground

The possibility of cover pool with liner, mosaic or tiles

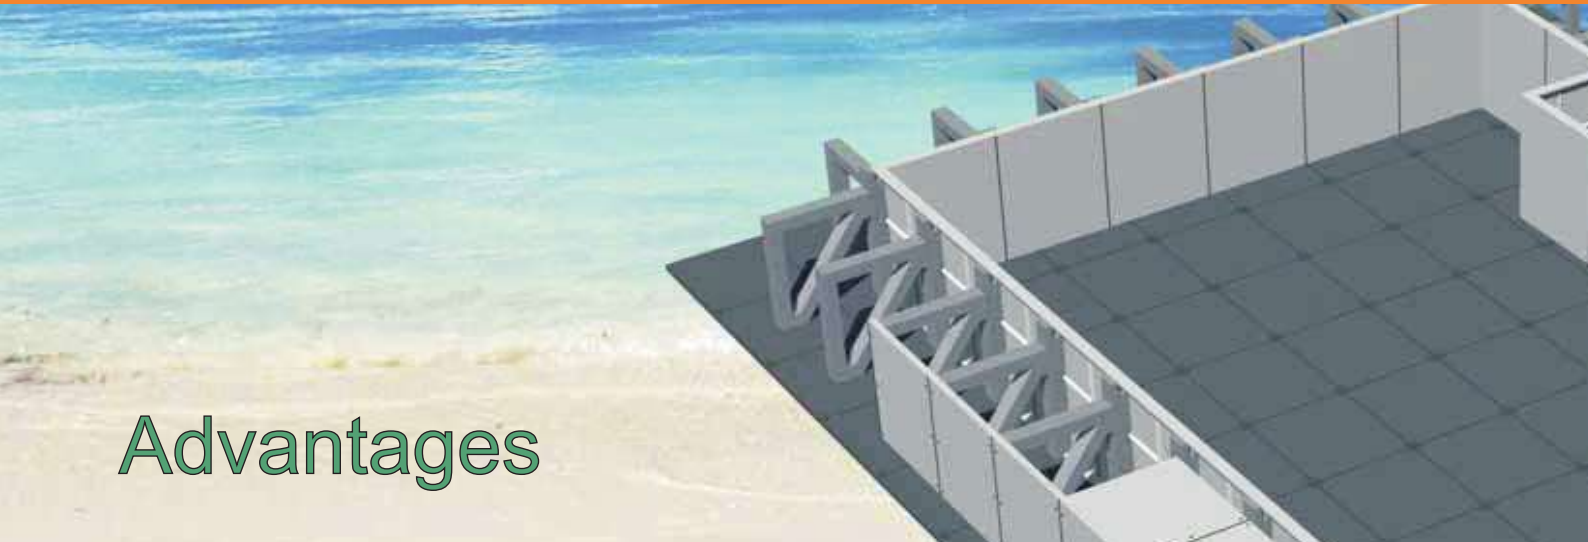

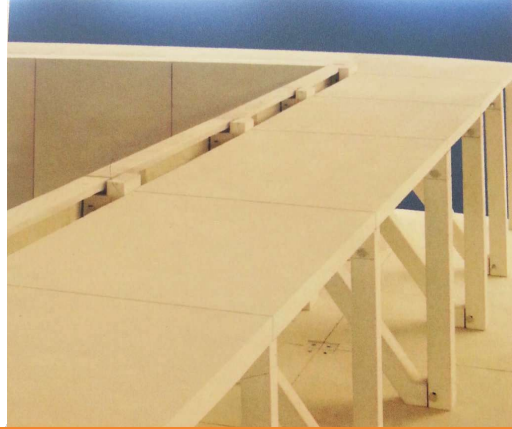

Ease of assemble and disassemble

ANY shape and size

Certificate of endurance (also to the earthquake)

Quick and easy assembly of the walls with concrete supports

Advantages

- ▶ Easy assembly
- ▶ The aesthetic appearance on the construction site
- ▶ Any shape and size
- ▶ Shock Resistance

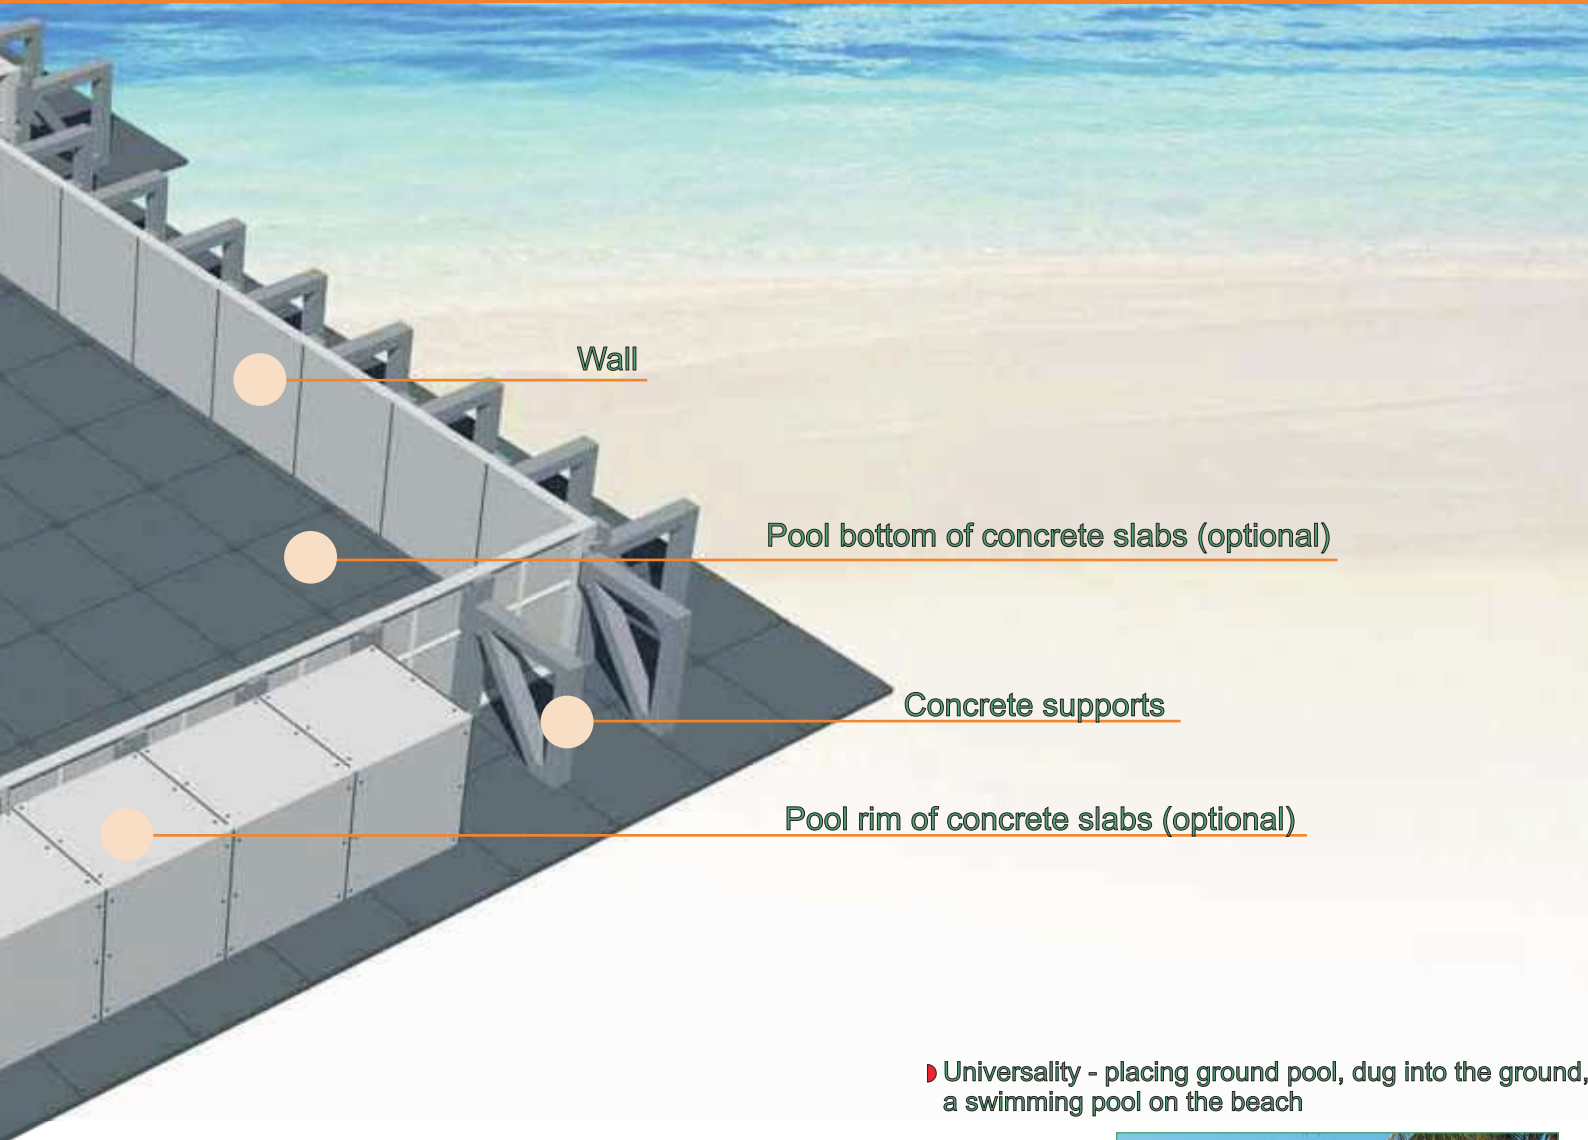

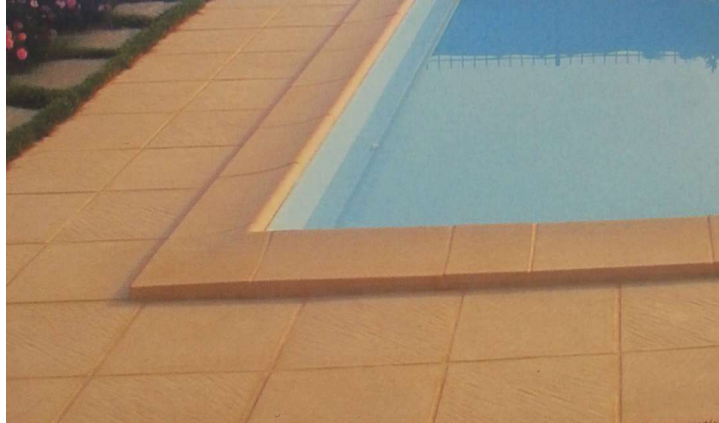

The incredible strength of the panel pool wall was achieved through the use of contribution of quartz and strengthen the construction with concrete supports.

- ▶ Building the pool in a very short time

- ▶ Possibility of cover pool walls with any material

Wall

Pool bottom of concrete slabs (optional)

Concrete supports

Pool rim of concrete slabs (optional)

► Universality - placing ground pool, dug into the ground, a swimming pool on the beach

► Quick finish of the pool rim (optional)
